		1.58	71.10

View inventory at multiple locations

Track changes to product margin

Inventory

Quickly and easily track or change QOH levels for individual items or for multiple products. Changes can be made through bulk batch counts or item inventory valuation reports.

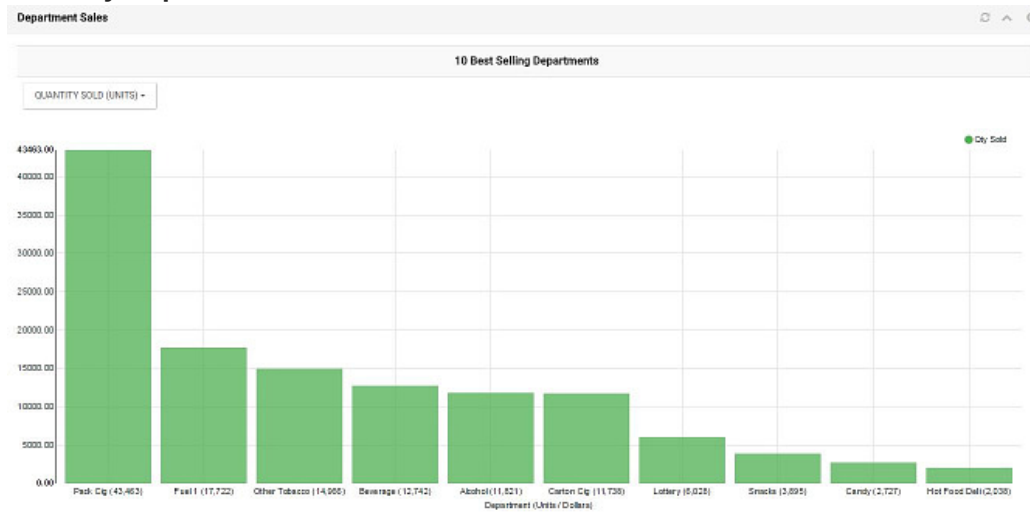

Batch Changes

Make batch price changes based on department and price. Change the vendor for a group of items from the central location and send it the information to all applicable sites.

Users

A user can easily login to the head office server with a user ID and password. This account is used to log the user's actions within the system. Roles can be defined for a group of users who have the same set of permissions, each user is assigned to a role to determine what they are allowed to do within the system.

Price Book

Common information that does not change between sites is stored in the item price book. This represents your PLU's descriptions departments groupings, etc.

Sites

Each of the sites in your company are assigned a site record. This record is used to denote the items, suppliers, etc., that are available for that specific site. Each site is also assigned to a single region. This region is used to easily make changes for all the sites within a single region.
